MODEL CARD-TRAFFIC SIGN CLASSIFIER

Model Details

- A Traffic Sign Classification model based on a Convolutional Neural Network (CNN) architecture.
- Designed to classify road and traffic signs from image inputs.
- Built with image preprocessing powered by OpenCV.
- Developed as an academic project.

Intended Use

This model is developed strictly for academic and educational purposes.

Intended for:

- Demonstrating applications of Convolutional Neural Networks (CNNs) in Computer Vision
- Learning image classification techniques using traffic sign datasets
- Experimentation and research in machine learning workflows

Not intended for:

- Real-world deployment in autonomous driving systems

Ethics, Policy, License, and Disclaimer

Overview

This document outlines the ethical considerations, intended use, limitations, risk mitigation strategies, license, and disclaimer for the Traffic Sign Classifier system.

The project focuses on the responsible development and evaluation of artificial intelligence models using Convolutional Neural Networks (CNN) and reinforcement learning techniques. The system is intended strictly for academic and research purposes.

Intended Use

The Traffic Sign Classifier is designed to:

- Demonstrate the application of Convolutional Neural Networks (CNN) in image classification
- Support academic learning and experimentation in computer vision
- Serve as a prototype model for traffic sign recognition

This system is **not intended for deployment in real-world or safety-critical environments**, such as autonomous driving systems, without extensive further development and validation.

Dataset Scope and Limitations

The dataset used in this study includes a limited set of traffic sign categories:

- Traffic lights
- Speed limit signs
- Stop signs
